

MAVOCO

Software QA Engineer

FULL TIME FOR THE LOCATION: **LUBLIN, WARSAW**

What you'll do

- Define, compose, and evaluate test plans
- Execute, functional tests, integration tests, regression tests, and create reports
- Troubleshoot and report all product tests issues within the appropriate tracking system (Atlassian, Jira)
- Create test scripts using common tools: Seagull, JMeter, Postman or others
- Work with the development team and project managers to develop a strong understanding of the product and testing objectives.
- Participate in spec reviews and requirements' definitions in order to detect measurable requirements for testing (completeness and accuracy).

An ideal candidate will have

- 2+ year of QA experience
- Overall experience in Test Automation Development and Systems Testing
- Experience with designing, developing and executing functional testing deliverables.
- Ability to learn JavaScript, Java, Linux, JSON API
- Capable of understanding products and processes and break them down into testing components.
- Analytical, troubleshooting and problem-solving skills.
- Good written/spoken English.
- Ability to travel

What MAVOCO offers

- Contract of employment
- Flexible working hours
- Work in professional, multinational and dynamic environment
- Friendly working atmosphere

Are you interested in working in a dynamic team? Do you like creative freedom and enough space to develop yourself? Are you a hard-working person that loves to work with people to achieve goals and push the company forward? If you recognize yourself when reading the questions above, then you will love to work at MAVOCO.
